TikTok Shop Partner — Evidence Submission Checklist

AutoClip | TikTok Shop Partner Security Review | 30 October 2026 | Revised evidence edition

This package contains corrected, internally consistent documents; it does not establish that every control is operational.

Before uploading

- Q1: approve/publish policy, fill entity and dates.
- Q2: add provider console evidence of segmentation/perimeter and production environment isolation.
- Q3: establish and prove endpoint protection, patch status, firewall and workstation unlock.
- Q4: approve evidence and confirm remaining password/administrator details.
- Q6: obtain Supabase encryption-at-rest evidence and production TLS/secret controls.
- Q7: approve runbook, conduct exercise, verify mailbox/register/backups.
- Q8: attach actual audit logs and verify deployed versions plus recurring schedule.

Do not overstate

- A Yes answer should be supported by real operational controls and dated evidence at submission time.
- Reviewers may reject documents marked partial/pending if no supporting production artifacts are attached.

Document control: Owner: AutoClip operator | Approval: pending | Reviewer/date: _____

Evidence rule: Only claim a control as operational after reviewing dated production or workstation evidence. Do not include secrets or personal data in screenshots.
